12/10/2014	SB1500060	1441 U ST NW	ECS will employ a Geoprobe direct-push drill rig to collect soil samples from 11 boring locations located throughout the site, outside of the existing buildings. Soil borings will be advanced to refusal, groundwater, or to the planned depth of excavation, whichever is encountered first. Four of the soil borings will be advanced to groundwater, assuming it is encountered at a depth obtainable by a Geoprobe drilling rig. The maximum depth for a Geoprobe is 40 ft. Backfill of the boring will be with bentonite slurry with a mix design of two pounds bentonite powder to one gallon of water and the grout will be placed via tremie to the bottom of each bore hole.	Building	Construction	Miscellaneous	Soil Boring	Permit Issued	84.70	0204 0208	1	1B		ECS MID-ATLANTIC LLC	Portner Place LLC Somerset Development CO

12/23/2014	SB1500073	908 FLORIDA AVE NW	Six proposed wells MW-16, MW-17, MW-18, MW-19, MW-20 and MW-21 are to be used as monitoring wells. A geoprobe 7822DT rig will be used and has the capability to push 4 or 5 foot acetate sleeves to collect soil samples and log soils. Once the boring has been logged, the rig will convert over to augers to drill the 10.25 inch borehole for the installation of the monitoring well. Each monitoring well will be installed to a depth of ten feet below observed groundwater, approximately 25-30 feet below ground surface. Based on previous field activities conducted by GES, it is anticipated that groundwater will be found at approximately 15-20 feet below ground surface. The monitoring wells will be constructed of 4-inch diameter schedule 40 PVC with continuous-wrap screen extending from final depth to approximately ten feet above the water table. Using 4-inch pipe and continuous-wrap screen will allow the monitoring wells to be converted to recovery wells if required. 12/29/2014	SB1500094	1724 KALORAMA RD NW UNIT 100	We will perform a total of two soil borings at the proposed site. The borings will be advanced to depths of 40 feet and 50 feet. The borings will be located within the bounds of the private property. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The boring will be performed utilizing a Truck-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the boring will be backfilled in accordance with DDOE requirements with bentonite slurry, which has a consistency of two pounds bentonite to one gallon water.	Building	Construction	Miscellaneous	Soil Boring	Permit Issued	36.30	2567 0851	1	1C		NICOLAS WAUGH	Murillo/Malnati Group

12/10/2014	B1502270	3537 ORDWAY ST NW	The proposed work is a modification to permit number B1408022. Instead of a planter to the east of the addition, an extension of the existing balcony in this location is proposed. Per comments made by zoning reviewer Shawn Gibbs on permit number B1408022, either a planter or an extended balcony is required to eliminate a non-conforming court condition. The owner would like to pursue an extended balcony in lieu of a planter that will extend to the property line. 12/5/2014	SB1500054	1850 NEW YORK AVE NE	ECS will abandon six monitoring wells located within the property. The monitoring wells will be abandoned by making an attempted to remove the 2-inch PVC from the ground. If the PVC cannot be removed, a tool will be inserted into the well to rip the PVC to ensure that the well casing and screen are filled with the grout material. After the PVC has either been removed or ripped, powdered bentonite slurry with a 60:40 mix ratio will then be placed using a tremie pipe from the bottom of the well/boring to the surface. The 60 to 40 ratio will consist of the following material 150 pounds bentonite powder to 94 pounds cement with 82 gallons of water. Any waste material generated PVC, well cover, etc will be disposed of appropriately. 12/5/2014	SB1500047	1319 GOOD HOPE RD SE	Completion of four borings to 20 feet with a three inches diameter using direct push technology for soil sampling. Three of the boreholes will be converted to monitoring wells for water sample collection. Each well will be both installed and abandoned per DDOE requirements. All soil that is removed from the boreholes will be placed in sealed drums sampling and disposal by a waste disposal contractor at proper facility. A mixture of 2 pounds of bentonite to one gallon of water will be used to fill each borehole using a tremie tube to within 6 inches of the ground surface. The remainder of the borehole will be filled concrete. A similar process will be implemented following removal of the temporary wells. Work will be conducted under DDOE regulation and per site plan, work plan report, DC well Construction and Schematic forms.
